
One Stop Stores Benefit from Automated Logistics, and Real-time Reporting on Stock

One Stop is a retail convenience store in the UK with over 900 shops. Intel and Flooid have been working together to create Flooid's Unified Commerce Platform and Flooid POS. This solution has been placed in One Stop shops across the UK. Before the network point of sale system, everything was very much manual. Store managers would have to come in store to see stock levels to determine what to order for the next delivery. Flooid centralized technology infrastructure supports staff and provides managers and business owners with a breadth of data, automated logistics and streamlined management tools. Edge computing powered by a selection of Intel® processors, allows devices to communicate wirelessly and effortlessly allowing stores to focus on building business and spending valuable time with customers.

> "The Intel technology really does give your business an edge. With a network system, you don't have to be in store, you don't have to be wandering up and down the aisles. It allows you to run your business from anywhere.
