Provisioning of new virtual environments.<sup>1</sup>

“Thanks to our HCI solution from Lenovo and Intel, we are building integrated business systems that will help accelerate our global growth and bring sustainable transportation to millions more people around the world.”

**Wang Ning, Head of IT and Digitalization, Huaihai Holding Group**

## Huaihai Holding Group is Speeding Ahead in the EV Marketplace

Huaihai Holding Group is a specialist producer of small vehicles, including cargo tricycles, city bikes, electric motorcycles and more. In the past, the company relied on a traditional three-tier data center infrastructure to deliver around 100 digital services to the business. The existing servers and storage arrays were approaching end-of-life, and there was limited space available in the data center for expansion. To meet booming global demand for electric vehicles, the company is ramping up production, supported by integrated business systems running on Lenovo ThinkAgile VX7520 Appliances powered by 2nd Gen Intel® Xeon® Scalable processors. The new hyperconverged infrastructure delivers vital digital services to the business 24/7, while reducing IT maintenance tasks by 60% and IT operational costs by 20%.<sup>2</sup>
