

Chandler Unified School District Boosts Efficiency and Cuts Costs with Data-Driven Insights

Chandler Unified School District (CUSD) serves more than 44,500 students in grades K-12. The stakes were high when CUSD faced the daunting task of justifying their recent investment in 3,000 devices with Intel® Core™ i5 processors. The district needed hard evidence to determine if these devices were up to the task to support day-to-day operations all while safeguarding student and district data. The Intel® System Usage Report (SUR) was the answer. Using telemetry data and custom visualizations, CUSD gained valuable insights that validated their investment and led to a decision to increase their implementation by 10,000 devices. CUSD now has improved visibility into device performance, power usage, and other aspects of its technology fleet.

“Besides being able to be proactive in terms of troubleshooting our devices, we really wanted to make sure our devices are in alignment with what we expect for the student and the teacher experience.”

Colleen Flannery,
CTO, CUSD
