bytesatwork Brings Enterprise-Grade Device Lifecycle Management to SMBs

bytesatwork supports small- and midsize-businesses (SMBs) in healthcare and education with Device-as-a-Service (DaaS) solutions. The company's manage4ALL + myCloudCenter DaaS solution is an end-to-end device lifecycle management offering. The integration with the Intel vPro® platform enables device manageability in one cost-efficient platform, equipping IT teams with Intel® Active Management Technology and Intel® Endpoint Management Assistant capabilities to manage dispersed devices, even when unresponsive. IT teams can achieve visibility across their fleet of devices from ordering and configuration through end of life with one easy-to-use solution, streamlining support, helping to strengthen security and improving reliability.

> "With the integration of the Intel vPro® platform, we can now also intervene in the BIOS and access devices without a functioning operating system. We do this using the hardware-level management capabilities of the Intel vPro platform with keyboard, video and mouse control (KVM), and boot redirection."
